Bonnet mop

The quick, simple way of cleaning most floors such as carpets or carpet tiles, as well as hard and resilient surfaces.

Bonnet mopping is a cost-effective way of cleaning low profile, high density carpets and flooring in heavy traffic areas, extending the period between deep cleaning.

There are four types available: a soft looped yarn for carpets; a hard floor bonnet for combination dirt collection and polishing; a microfibre mop; and a high-performance Queen bonnet.

Carpet bonnet mops are white, a little softer and more absorbent. Hard floor bonnet mops are made from a mixture of white and coloured fibres. They are slightly less absorbent and harder for greater abrasion. The microfibre bonnet mop can be used damp without the use of chemicals, absorbing many times their weight in dirt, dust and moisture, and are ideal for removing scuff marks, spills and sticky marks. Queen bonnet mops feature scrub strips for improved cleaning performance.

Key features & benefits

Microfibre cleaning

Floorcare

Wash after use

- Cost-effective way of cleaning heavy traffic areas between deep cleans.
- Designed for use with rotary machines.
- Available as a range from carpets to hard flooring.

Product make up

Designed to be used with a rotary machine, the yarns are attached to a centre backing cloth which provides additional strength and prevents distortion during repeated use.

How to use

Dry vacuum first and only use standard speed rotary machines. The solution is applied either by trigger spray, directly onto the bonnet mop, or via the machine solution tank. An alternative method is to place the bonnet mop in a bucket of solution and wring it out using the gear wringer – this is effective on large areas. Depending on the surface, it is advisable to check the solution for colour fastness on a small, discreet area.

Start mopping at the furthest point from the exit, ensuring the passes overlap. Check the bonnet mop frequently, reverse, change or soak and wring as necessary. Bonnet mops can be laundered.
