**Dry-up pad**

# Clean up spilled liquids with the new Dry-up super absorbing disposable pad.

An innovative product changing the way you deal with liquid spillages forever, without the need for heavy mopping or wiping. The Dry-up pad replaces time consuming traditional methods, where liquids had to be soaked up, treated with chemicals and left to dry. Once used, it now only requires a quick wipe to remove any residue liquid. One Dry-up pad can absorb up to a litre of liquid, and the used pad can then be safely disposed of.

The pad has three layers to remove spills quickly and hygienically. The bottom layer soaks up liquid, drawing it into the super-absorbent middle layer, which changes it into a gel and bonds it securely into the pad so it cannot leak back. The waterproof top layer stops anything leaking through and ensures the user does not come into contact with any unpleasant or hazardous spillages.

It's ideal for a wide range of liquid spills including oils in kitchens or garages, water and other liquids, or even blood and urine in hospitals, though disposable gloves should always be used to prevent contamination.

## Key features & benefits

Time saving

Highly absorbent

Tripple layers

High performance

- Fast - soaks up spills in seconds, leaving surfaces clean and dry.
- Hygienic - liquid is bonded into the pad reducing leakage and contamination.
- Timesaving - replaces traditional methods for a faster clear up.
- Super absorbent - one pad can absorb up to a litre of liquid.

## Review

Dry-up is an innovative product designed to ensure the safe clean up of slip-risk and unpleasant liquid spills, such as urine, blood, coffee, oil, bleach, chlorine and kitchen fat, which often demands a speedy response. That's why it's perfect for cleaning up blood or urine in hospitals and care homes, hazardous spills such as oils in the automotive industry or kitchens, and slippery floors in public

environments such as airports, supermarkets and restaurants.

## User instructions

Place the pad over the spill, non-printed side down, and leave for up to 150 seconds to absorb liquid and convert it into gel. For larger spills, use more than one pad.

Once liquid has been absorbed, remove pad carefully, holding the waterproof top layer for protection, and dispose of pad safely. Always wear protective gloves.

## Related products

To build a rapid response Dry-up kit use with a wet floor sign, disposable vinyl gloves and baggy sweeping set.
