Mini PowerZone

Portable and high power Mini PowerZone odour removal and air and surface disinfectant system.

The Mini PowerZone is a powerful and environmentally friendly odour and germ control system that uses UVC light to treat airborne contaminants passing through the unit, as well as producing purifying PhotoPlasma, to effectively remove germs and odours at source in any room. As it's lightweight and portable, it's a fast and effective way to deodorise and disinfect any room quickly so they can be reopened for use.

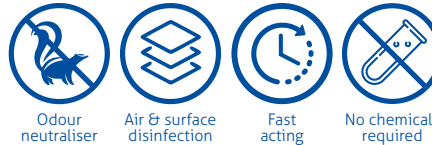

What does it deodorise and disinfect?

Cigarette smoke, fire damage, urine, food, pets and mould, along with airborne viruses and surface bacteria such as influenza, Salmonella and Streptococcus. Both elements of UVC and PhotoPlasma technology have been tested and proven effective against Human Coronavirus.

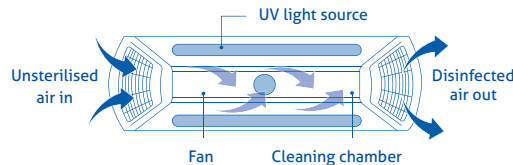

How does it work?

Air is drawn into the unit and treated using UVC light that kills microorganisms. At the same time a purifying PhotoPlasma is produced which circulates in the room destroying airborne and surface contaminants.

Key features & benefits

- Saves time and costs by eliminating odours at source.
- Portable so ideal for hotel rooms or emergency clean ups.
- Automated and chemical-free without leaving residue.
- Does not use consumables and minimal running costs.
- Minimal maintenance with simple UV lamp change rated for 9000 hours of use.
- Supplied with a carry handle, wall plug and one year warranty.
- Ideal to deodorise hotel rooms, care homes, holiday lets, vehicles, schools, office buildings, etc.

Why Mini PowerZone?

It is ideal for spaces that need to be cleaned and deodorised for a quick turnaround. Due to its effective air and surface disinfection capabilities, and its natural ability to destroy airborne viruses, it quickly removes odours without the use of chemicals.

How to use

Close any windows, doors and vents, place the unit on a table, set the timer and switch on. Then vacate the room and within 30 minutes (depending on room size and odour strength) the odour is removed and room disinfected. Reopen the windows and doors for 20 minutes to air the room, after which point it is ready to be used.

Health & Safety

When in use, people must stay out of the room until 20 minutes after it has stopped.
